

# HIGHSTEP PROTECTOR

## PRODUCT DATA SHEET

The HighStep Protector is a mobile fall arrest device that attaches to the rail to provide essential fall protection during all climbing operations.

### The Fall Protection Runner

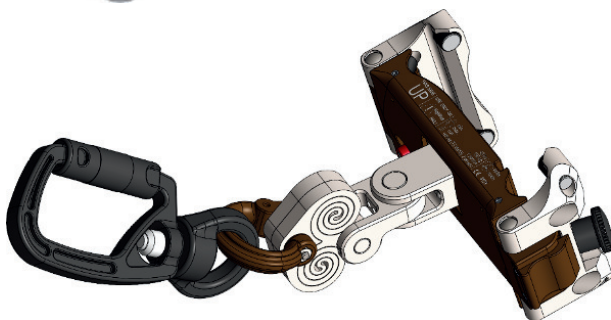

The HighStep Protector must be used during all climbing operations. It is an independent fall arrest device that moves along the rail, providing constant protection through automatic locking mechanisms.

### Maximum Safety

The device locks instantly onto the rail if sudden downward movement occurs, preventing falls. The built-in shock absorber reduces impact forces in case of activation. The Protector must always be used in conjunction with the HighStep Easy and HighStep Lift climbing systems.

### Smooth Operation

Multiple rollers ensure smooth movement along the rail during normal climbing. The optimized design prevents catching or jamming, allowing comfortable and efficient climbing while maintaining safety.

### Technical specifications

|                 |                 |
|-----------------|-----------------|
| Maximum payload | 150 kg          |
| Weight          | 700g            |
| Inspection      | Every 12 months |

### Implemented Standards

- EN 353-1:2014 + A1:2017 EN 795/B:2012 and CEN/TS Z6415:2013

### Emergency Anchorage Point

The Protector features a single-action attachment point for emergency situations. It is certified according to EN 795 B standard for up to two people, making it suitable for rescue operations.
